Epson statement on Packaging and Packaging waste Regulation (EU) 2025/40 (PPWR) Compliance

To whom it may concern,

As a part of Epson's commitment to the environment we continuously work on improving the environmental performance of our products and their packaging.

We confirm that Epson packaging currently placed on the European market is fully compliant with the requirements of the existing EU Packaging and Packaging Waste Directive (94/62/EC).

Looking forward, Epson is closely following the new EU Packaging and Packaging Waste Regulation (PPWR), which will replace the current Directive). This Regulation aims to tackle the growing issue of waste packaging, promote a circular economy, and ensure that packaging placed on the EU market is minimized, highly recyclable, and environmentally sustainable. We acknowledge the obligations outlined in the PPWR and are taking proactive steps to meet these requirements ahead of the key compliance deadlines starting from 12 August 2026.

We are dedicated to collaborating with our suppliers and customers to ensure compliance throughout the value chain, including the preparation of necessary technical documentation and conformity assessments. We are actively engaging with them and competent authorities to share information on the PPWR, and to ensure our timely compliance with the regulation.

For more information about Epson's environmental program in Europe please refer to our environmental website: <https://www.epson.eu/about/environment>

Sincerely yours,

Boris Manev
